*Biochemistry according
to
Dr. Schüssler*

Wilhelm Heinrich Schüssler was born on 21.08.1821 in Bad Zwischenahn near Oldenburg (Germany).

His work was shaped by three exceptional people of his time: Samuel Hahnemann, founder of homoeopathy, Rudolf Virchow, discoverer of the cell as the smallest module of the human body and Jakob Moleschott, who discovered the importance of inorganic substances for the organism.

The deficiency of minerals causes diseases and their supply is able to remedy.

With this approach he developed the therapy, in which 12 minerals are brought together in a nowadays still successful healing method – the Biochemistry according to Dr. Schüssler.

Today, the company Pflüger looks back on a decades-long tradition in the manufacturing of biochemic remedies according to Dr. med Schüssler.

*“A person can only remain
healthy if their body has the
necessary minerals for
composition and conservation”*

Jakob Moleschott
